## **DETAILED ACTION**

### ***Response to Arguments***

Applicant's arguments, filed 9/22/06, with respect to claims 1-13 have been fully considered and are persuasive. The rejection of claims 1-13 has been withdrawn.

### ***Claim Objections***

Claim 5 is objected to because of the following informalities: it is not clear whether "a compressed gas..." in claim 5 is identical to the "a compressed gas..." in claim 1. Appropriate correction is required.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000.

Art Unit: 2874

Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

**Claims 1-13 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Perez et al [USPAT 6,468,451].**

Perez et al disclose a method comprising:

a) mounting an amorphous polymeric optical element [column 1, lines 19-26] into a chamber [column 6, lines 14-26];

b) introducing a compressed gas in a supercritical phase or a liquid or vapor phase approaching the supercritical phase [column 6, lines 23-26] as an annealing medium into the chamber and annealing [column 10, lines 44-48] polymeric optical element; and

c) removing the annealing medium from the chamber [column 3, line 6]:

In re claim 3, Perez et al show at column 3, lines 46-56 that ionomers and thermoplastic elastomers such as styrene/ethylene/butylene/styrene (SEBS).

In re claim 4, Perez et al show the amorphous polymeric optical element is a plastic optical fiber [abstract].

In re claim 7, Perez et al show at column 11, lines 30-43 that the gas can be CO<sub>2</sub>.

In re claims 8 and 9, the claimed limitations are inherently performed in Perez et al reference.

In re claim 12, Perez et al show at column 4, lines 25-43 that the temperature is about 30°C, and the pressure is about 143 atm.

In re claim 13, Perez et al show in abstract the use of optical fiber, and different mixture of polymers in column 15 and 16. The adhesive coating can be considered as cladding layer of the optical fiber, the claimed material can be made by the mixture of different polymers as shown in column 15 and 16.
